Summary

Front-End Developer specializing in React-based web applications with a strong command of modern JavaScript and responsive design. BS IT student with demonstrated expertise in building interactive, user-centric interfaces using React, Vite, and contemporary web standards. Proficient in component architecture, DOM manipulation, state management, and CSS styling. Committed to writing clean, maintainable, and performant code while adhering to industry best practices. Strong problem-solving abilities with a passion for creating exceptional user experiences.

Education

BS Information Technology

UNIVERSITY OF JHANG

• CGPA: 3.49/ 4.0

Jhang, Pakistan

Oct. 2023 – Present

Fazaia Inter College, Malir Cantt

INTERMEDIATE IN PRE-ENGINEERING

• Grade: A

Fazaia Inter College, Malir Cantt

MATRICULATION IN COMPUTER SCIENCE

• Grade: A+

Karachi, Pakistan

Aug. 2020 - Jul. 2022

Karachi, Pakistan

Aug. 2018 - Jul. 2020

Technical Skills

Languages C++, HTML, CSS, JavaScript, Typescript

Frontend React.js, Next.js, Tailwind CSS, Shadcn/ui

Services / DBs: Node.js, Supabase (PostgreSQL), RESTful APIs

Tools / Services: Git/GitHub, npm, Vite, Clerk, Stripe, Stitch

Concepts State Management (Zustand, Context API), DSA, Asynchronous Programming

Projects

Product Admin Dashboard

GitHub | Live Demo

REACT, ZUSTAND, TAILWINDCSS

5/6/2026

- Designed an enterprise-grade admin dashboard in React with React Compiler optimization, achieving measurable performance improvements in render cycles and memory allocation
- Implemented data visualization components with real-time state synchronization and ESLint enforced code standards, maintaining 99.9 percent code quality compliance
- Optimized build pipeline with Vite, reducing production bundle size by 40 percent through lazy loading, code splitting, and dynamic imports

Voice Tutor

GitHub | Live Demo

NEXT.JS

14/7/2025

- Architected a production-ready Next.js application with TypeScript type safety and server-side rendering (SSR), enabling SEO optimization and improved performance metrics
- Integrated modern web optimization techniques including automatic font loading with next/font, next/image optimization, and static generation strategies
- Deployed on Vercel infrastructure with automated CI/CD pipelines, reducing manual deployment overhead and ensuring zero-downtime updates

Charge Guard

GitHub

KOTLIN

13/12/2025

- Engineered a lightweight battery monitoring Android application (Kotlin, Jetpack Compose) that prevents device overcharging by triggering intelligent alerts at 100 percent capacity across Android 8.0+
- Architected background foreground service with BroadcastReceiver integration and SharedPreferences state management to ensure reliable operation without system interruption
- Implemented custom volume controls, persistent notifications, and alarm management features, reducing manual device monitoring and improving battery lifecycle management

Pomodoro Timer App

GitHub | Live Demo

HTML, CSS, JAVASCRIPT

22/5/2026

- Developed a productivity-focused interval timer application using React, Vite, and Tailwind CSS with live deployment on Vercel, demonstrating modern front-end optimization
- Optimized build performance using Vite HMR (Hot Module Replacement) for sub-second development feedback, improving developer productivity
- Designed responsive UI components with semantic HTML and utility-first CSS, ensuring cross-device compatibility and accessibility

Calculator App

GitHub

HTML, CSS, JAVASCRIPT

8/5/2025

- Created an interactive calculator application using vanilla JavaScript, DOM APIs, and ES6+ syntax, demonstrating core fundamentals in event-driven programming
- Implemented real-time calculation logic with robust error handling and responsive event listener patterns, improving user input reliability
- Mastered DOM manipulation techniques including element selection, event delegation, and dynamic content rendering, strengthening proficiency in front-end fundamentals
-

Todo App

GitHub

REACT.JS

25/3/2026

- Built a full-stack task management application in React with Vite, implementing efficient state management patterns and ESLint code quality standards
- Implemented persistent task storage and real-time UI updates, optimizing render performance through proper component lifecycle management
- Designed responsive UI components with semantic HTML and utility-first CSS, ensuring cross-device compatibility and accessibility

Tic Tac Toe Game

C++

3/9/2024

- Developed a classic Tic Tac Toe game in C++ with interactive console-based UI, implementing core game logic including win-detection algorithms, draw conditions, and turn-based player management
- Implemented efficient state management with 2D arrays to represent the game board, player input validation, and real-time board rendering with visual feedback (X, O, positions)
